

Subhash Jugran

AWS & Azure Cloud Architect, Lead DevOps & Cloud Engineer

Lead Cloud Architect with 18+ years of experience designing scalable, secure, and cloud-native infrastructure across enterprise environments. Expert in **Linux, Kubernetes, container platforms, DevOps, and hybrid/multi-cloud architectures**, with a strong focus on **automation, DevSecOps**, and **large-scale cloud migration through CCoE frameworks**. Proven leader in driving cloud transformation, **platform engineering**, and **AI-driven operational efficiency** while leading cross-functional teams to delivering secure, scalable, and business-aligned cloud platforms.

TECHNICAL SKILLS

Cloud Platforms: AWS, Microsoft Azure & Google Cloud (GCP)

Generative AI & AI Platforms: Amazon Bedrock, Sage Maker, Azure AI Foundry, Azure OpenAI, Strand Agents.

DevOps: Git, Bamboo, Jenkins, Bitbucket, Jira, Confluence, SonarQube, Nexus, AWS DevOps

Virtualization & Containers: Docker, Podman, Kubernetes, Helm, EKS, ECS, Fargate, AKS, ECR, ACR, Nginx, Lambda, VMware.

Security: AWS Firewall, Azure Firewall, Guard Duty, AWS Shield, AWS Inspector, AWS VPC Endpoints, Imperva, CrowdStrike

Scripting & programming language: Python, Shell Scripting (Bash)

Infrastructure as Code (IaC): Terraform, CloudFormation, AVM and AWS CDK, Ansible, Chef, Puppet

Database: MySQL, PostgreSQL, AWS RDS, AWS Aurora, Azure Database, AWS DynamoDB, Cosmos DB, ElastiCache, Redis, Memcached

Vaults: AWS Secrets manager, KMS, Azure Vault

Streaming and Queuing services: Kafka, SNS, SQS, Kinesis, Azure Event hub, EventBridge, Event bus

Observability & Monitoring: AWS CloudWatch, Azure Monitor, Prometheus, Grafana, ELK, Elasticsearch, AWS OpenSearch

Operating Systems: Windows, Red Hat Enterprise Linux Server (RHEL), Ubuntu Linux, SUSE Linux Enterprise Server (SLES), CentOS

Non-Technical Skills: Verbal communication skills, Teamwork, Analytical skills, Client satisfaction, Business objectives, Agile methodologies, Scrum, Service Now, Process management, Project management, Problem Management, Change Management

PROFESSIONAL CERTIFICATIONS

- **AWS Certified Solutions Architect Professional**
- **AWS Certified Solutions Architect Associate**
- **Certified Kubernetes Administrator**
- **Microsoft Azure Architect – Expert**
- **Microsoft Azure DevOps Design Solution**
- **Microsoft Azure Security Engineer**
- **Foundation of AI from AI Singapore**
- **Google Cloud Professional Architect**
- **Red Hat Certified Engineer (Linux)**
- **Sun Certified System Administrator in Solaris 10**
- **AIX 6.0 Certified Administrator**
- **VCP Automation (VMware Certified Professional 6)**

WORK EXPERIENCE

Lead DevOps and Cloud Engineer

Singapore Telecommunication Ltd (Singtel)

July 2021 – till now, Singapore

Technologies and tools: AWS, Microsoft Azure, Python, Terraform, AWS CDK, Amazon Bedrock, AWS Systems Manager (SSM), API Gateway, EKS, Bamboo, Bitbucket, Jira, Nexus, Confluence, Prisma Cloud, Tenable, CrowdStrike, AWS Security Hub, AWS Inspector, Azure Security Center, Imperva...

Summary: Designed and implemented enterprise-scale AWS and Azure landing zone architectures with a strong focus on automation, security, and governance aligned with Cloud Center of Excellence (CCoE) frameworks. Led the development of reusable Infrastructure-as-Code (IaC) modules and DevSecOps pipelines for AWS & Azure resources deployments.

Key achievements include:

- Designed and implemented automated onboarding for AWS Landing Zone using Control Tower, enabling secure multi-account provisioning across enterprise workloads.
- Automated onboarding processes to the Azure landing zone using Azure Cloud Automation Framework (CAF) and Azure verified module (AVM)
- Built generic Terraform modules for AWS/Azure resource deployment by application teams.
- Created generic CloudFormation templates using Python scripts for AWS resource deployment.
- Integrated IAM identity center for the enterprise, creating customized permission set roles for SSO users and service users using IAC.
- Prepared secure CI/CD architectures for applications using Ansible, Terraform, Bamboo, Nexus, Nexus IQ, Fortify, and SonarQube.
- Worked & managing EKS clusters using CDK and applications deployment using Helm charts.
- Implemented security measures such as AWS Network Firewall (Ingress/Egress), WAF, Shield, AWS Inspector, CloudTrail, VPC logs, AWS Config, AWS Secrets Manager, Security Hub, and Imperva for web protection, Tenable.
- Set up monitoring and alarms using CloudWatch, Dynatrace, ELK and circuit breakers for different metrics.
- Analyzed logs for security issues using Athena and Glue.

Consultant (Linux, Private/Public Cloud Architect)
HCL Singapore Ltd.

Jan 2012 to July 2021, India & Singapore

Technologies and tools: AWS, Azure, RHEL, Red hat Cluster, Solaris, HP-UX, Service guard cluster, Google cloud, VMware, Git, Jenkins, Chef, Ansible, Docker, Kubernetes, service now, Jira, shell script, Python.

Summary: worked as Technical Lead with HCL Singapore and provided support & solution to our client who is leading Global pharmaceutical company. we are managing their more than 15K+ Linux/Unix servers ,25K + Windows and 10K+ AWS, AZURE, Google instances. My responsibility was to manage the team of 50+ offshore engineers who provide the 24X7 L3/L4 support to Linux, Unix & Cloud Infrastructure (AWS & AZURE). I also worked for new strategic initiative for Provisioning, Security, Automate the day-to-day operation and participate in higher management meeting about the progress update.

Key achievements include:

- Led a Linux and Cloud team, handling escalated and critical issues related to Linux/Unix OS, AWS, Google Cloud, and Azure.
- Lead project planning efforts, employing a meticulous approach to scheduling, resource allocation, and risk management to ensure successful outcomes.
- Provide regular progress updates to senior management, offering insights into project milestones, challenges, and successes.
- Designed solutions and provided support for the migration of VMs and physical servers into a private cloud environment (SDDC) or other public cloud platforms. Actively participated in designing Business Continuity Planning (BCP) setups and conducting testing.
- Played a key role in designing and implementing customer applications and infrastructure on public cloud platforms such as AWS and Azure.
- Collaborate with stakeholders to secure budget approval, emphasizing cost optimization strategies to maximize resource efficiency
- Contributed to Datacenter Consolidation projects by migrating multi-tier applications to the cloud, resulting in reduced physical legacy infrastructure.
- Managed the infrastructure of Virtual Private Clouds (VPCs) in AWS and Azure, including conducting cloud security reviews.
- supported for various aspects of AWS Cloud infrastructure, including EC2, IAM roles, VPC, S3, Endpoints, Redshift, and CloudFront.
- Developed playbooks/recipes to automate day-to-day operations using DevOps tools like Chef, Ansible, Jenkins, Docker, and GitHub.
- Provided assistance in deploying container solutions using Docker and managing Kubernetes clusters.
- Conducted patching and hardening of Linux and Unix servers, managed HP Service Guard and HA Clusters.
- Documentation for Knowledge articles for Linux/Solaris DR Testing and Troubleshooting/Management of Linux & Solaris Servers and AWS cloud management/deployment in confluence.
- Configure the Centrify login (AD authentication) on the entire Linux and Solaris servers.

Lead and Subject Matrix Expert (Linux/Unix & Storage)

Accenture Services Ltd

Feb 2009 – Jan 2012, India

Technologies and tools: Red hat Cluster, XEN Virtualization, Solaris Zones & LDOM, Veritas Volume Manager, Veritas Clustering, NIM, Tivoli Backup Manager, HP OpenView Data Protector, NetBackup, Net vault Backup, Apache, SAMBA, NFS, Vision Fs, Connected Storage and Raid Controller manager, EMC: CX700, CX3-80, EDL710, EDL4100, NS80, NS502, Centera 8 & 16 Node and IBM: DS4500, DS4800 & DS5100

Summary: I led the Unix Team and Storage team for giving offshore support to Carillion plc which is one of the UK's leading support services and construction companies. Carillion has more than 1400 servers which are spread across the multiple datacenters.

Key achievements include:

- Successfully done project transition (Unix & Linux) and did the offsite Unix KT from the Client.
- Prepared the UNIX/Linux Run Book and other process document during the Transitions phase of project.
- Actively participate in creating incident/change management, setting up the Unix server monitoring and creation of other related policies after/during projecttransition.
- Created the shell scripts to monitor the server status and performance.
- Reconfiguration of HP OpenView Data protector backup software with monitoring scripts. AIX TL Upgrade and Linux server patching.
- AIX DR Setup. (Create new LPARs from the mksysb image of live servers) Performed the TA for Unix Server transfers in DC Move operation.
- Installed and configure new servers (Linux, HP-UX, AIX and Solaris) in the current environment as part of D&D projects.

System Administrator (Linux & Solaris)
HCL Comnet Ltd

July 2007 – Feb 2009, India

Technologies and tools: Red hat Linux, Solaris, VMware, Xen, Apache, Tomcat, perl, LDOM, Veritas Clustering

Summary: Worked in IDC (Internet Data Center) of National Informatics Center (NIC), a premiere organization of the Government of India in the field of Informatics Services and Information Tech. NIC maintains state-of-the-art Web/DB servers in IDC at NIC Headquarters, which currently hosts around 3000

Key achievements include:

- Web Hosting under Linux Infrastructure
- Centralized DB Hosting Services on MySQL, PostgreSQL
- Web Server Administration (Apache). Application Server (Apache, Tomcat) Trouble Shooting of Web Applications.
- Installation and configuration of Sun Solaris 10. Installation and configuration of VMware's Server.
- Installation, Configuration and Troubleshooting of RHEL Cluster Services. Installation, Configuration and Troubleshooting of Xen Virtual Services.
- Installation & configuration of LDOM and Veritas Clustering solutions.

System Administrator (Linux & AIX)
Patni computer System Ltd

Aug 2006 – July 2007, India

Technologies and tools: Red hat Linux, AIX, Shell script, Squid proxy, Nessus

Summary: Worked as System Administrator in IBM's Project at Bharti Airtel Data Center (more than 100 servers on site) in Okhla Phase III, New Delhi. This project is based on IT Infrastructure, Operations & Security of Bharti Airtel Ltd. throughout India and which is completely handled by IBM India Ltd.

Key achievements include:

- Installation & Configuration of system Software (RHEL4, RHEL5 and AIX)
- Installation & configuration of Oracle 9i on Linux, Backup of databases (on-line and off-line) and restore in case of data failures.
- Develop the solution to automate regular activities through shell scripts.
- Proxy Server Configuration and Management using Linux Squid Server for Internet (Active Directory based user Authentication System).
- Installation and Configuration of Nessus server.
- Security Compliance for servers using Nessus server to close security threats.
- Disk management & Patch updating of RHEL, AIX and Nessus server.
- Server Hardware problem determination and resolution.
- Manage OS Configuration, Security, and Parameters settings on Linux Servers in compliance with global security guidelines.
- Using Veritas Netbackup Client for backup of databases on AIX servers.

EDUCATION

MCA (Master of Computer Applications)
(2004 – 2006)

BCA (Bachelor of Computer Applications)
(2001 – 2003)
